

Open Protocol System

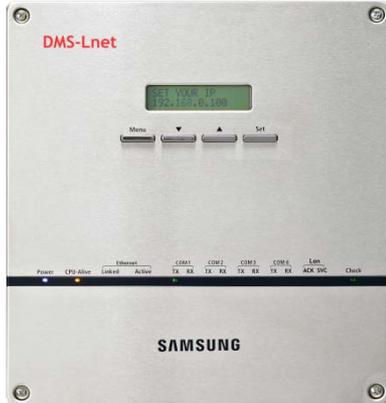

MIM-B18

- Hardware Specification

Size		240 * 255 * 64.8 mm (Width * Length * Depth)
Power supply	Source	DC Adaptor
	Input	100~240VAC (±10%), 50/60Hz
	Output	12V 3A
Operating humidity range		0%RH ~ 90%RH
Storage temperature range		-20 °C ~ 70 °C
Communication connection		Lower layer : RS485 (to centralized controllers) Upper layer : Ethernet 100Base-T (S-NET3, S-NET mini, Web Browser) LonWorks layer : TP/FT-10A(Free topology 78kbps)
Max. communication length		Lower layer : Maximum 1000m (RS485) Upper layer : 100m (for one segment without repeaters) LonWorks layer : 78 kilobits-per-second bit rate for distances up to 500 meters in free topology or 2700 meters in bus topology with double terminations
Max. number of interface		Lower layer : 16 centralized controllers, 80 interface modules Upper layer : Unlimited

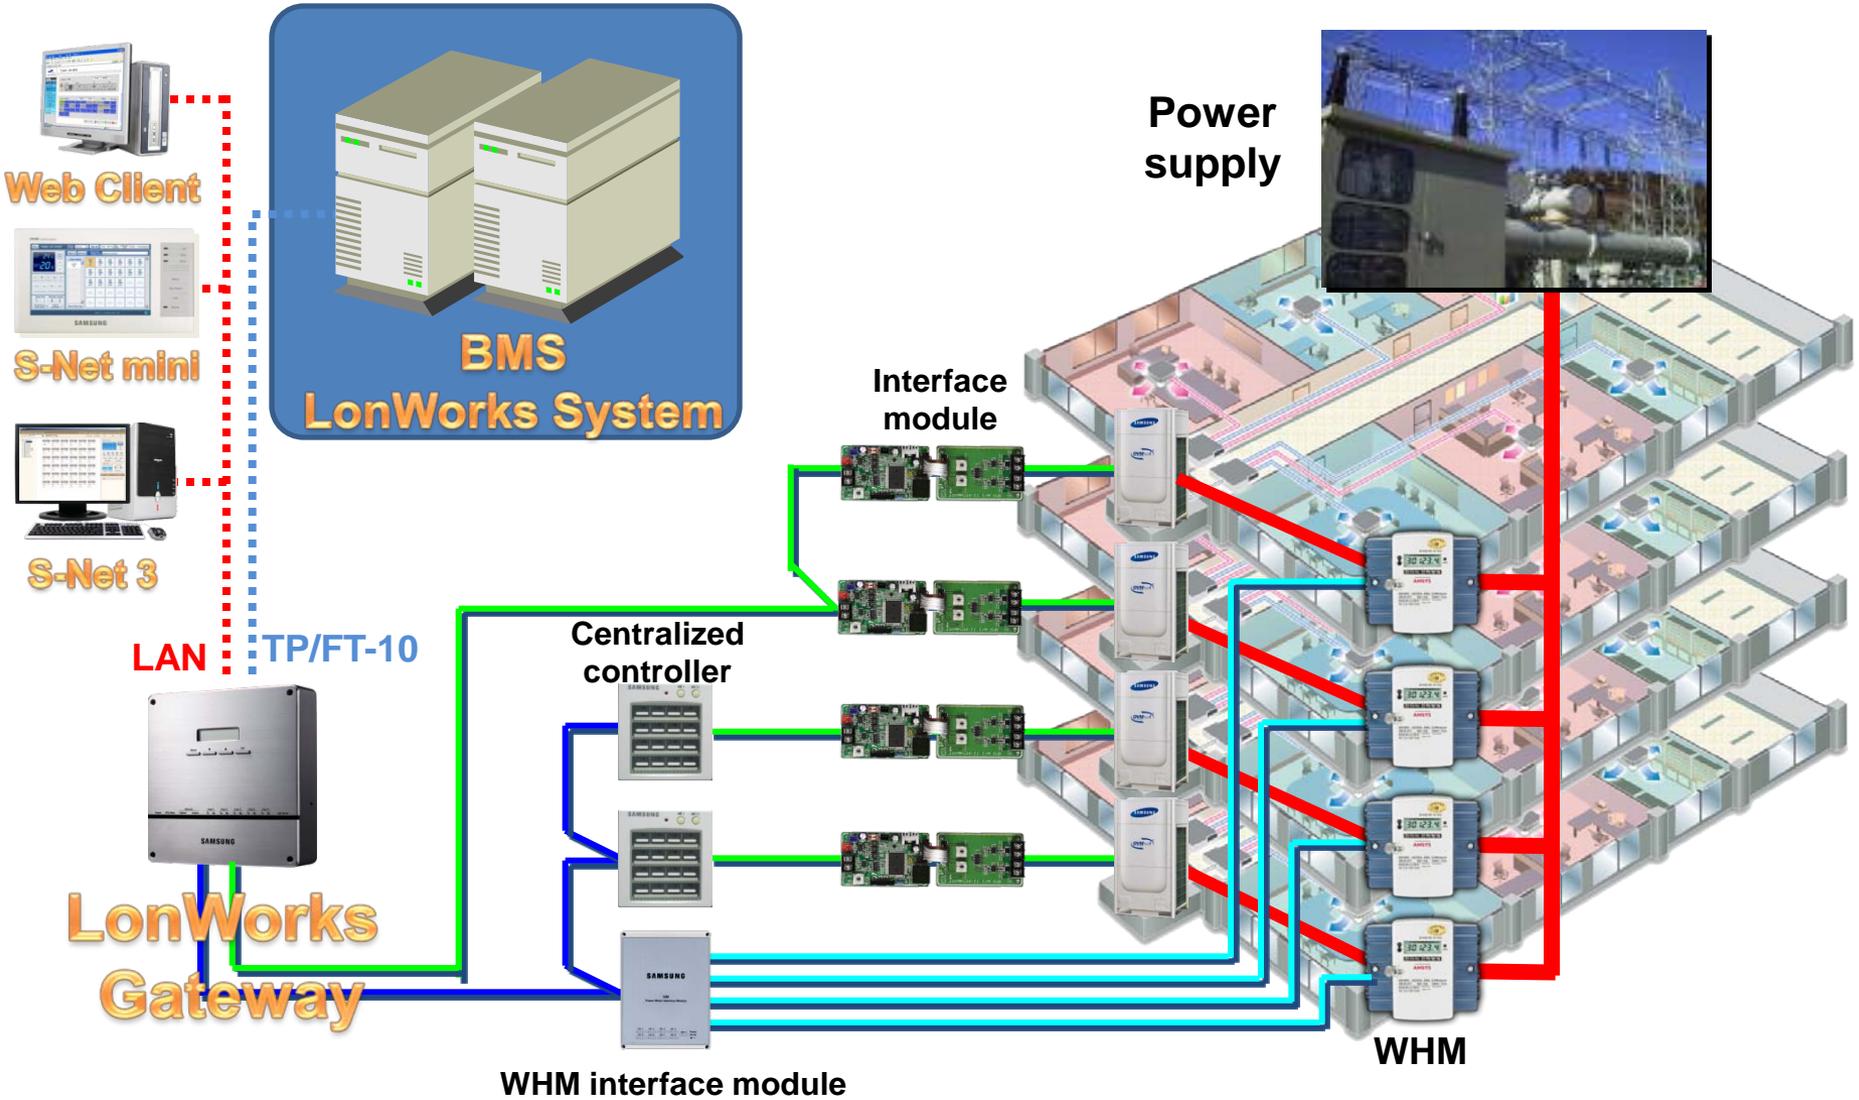

- Software Specification

<p>General Function</p>	<ul style="list-style-type: none"> • Built-in web server for PC-independent management and remote access control • Multiple upper-layer control access (S-NET 3, S-NET Mini, Web-client) • Weekly/Daily schedule control • Power distribution function • Current time management even during power failure (for 24 hours) • Emergency stop function with simple contact interface • Individual/Group control of up to 128 indoor units include ERV, AHU • User editable control logic • Accessible level management. • Dynamic security management • Operation & error history management • Data storage in non-volatile memory & SD memory
<p>LonWorks Function</p>	<ul style="list-style-type: none"> • Up to 27 network variable settings per one indoor unit. • Support network variable to control and monitor normal indoor unit, ERV and AHU • Monitoring Power distribution data. • Setting the high & low temperature limit • Accessible level management.

LonWorks Gateway – MIM-B18

- System Structure

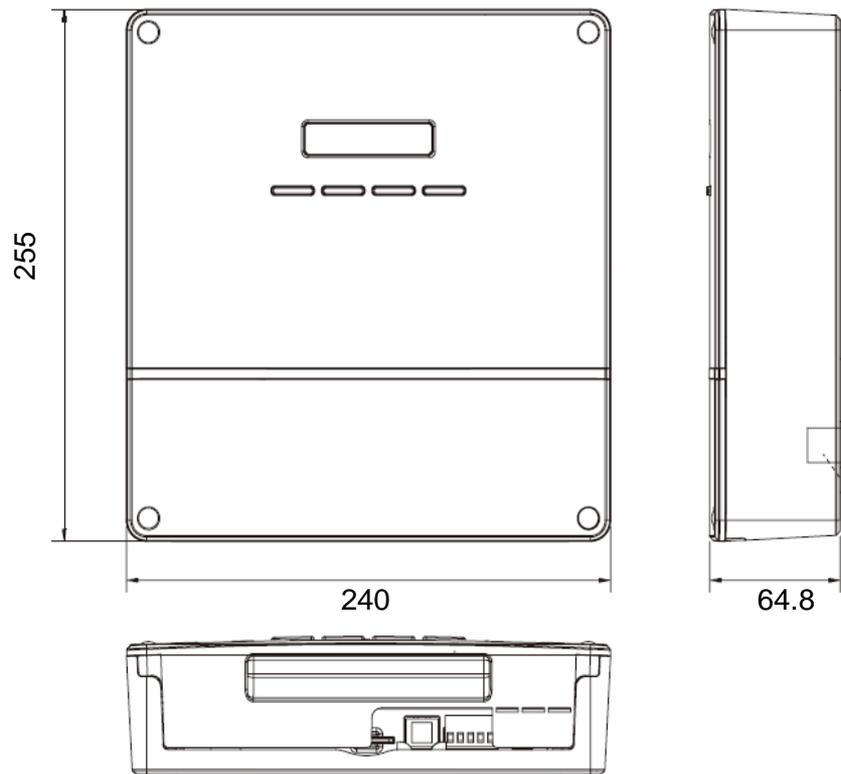

- Compatible Interface

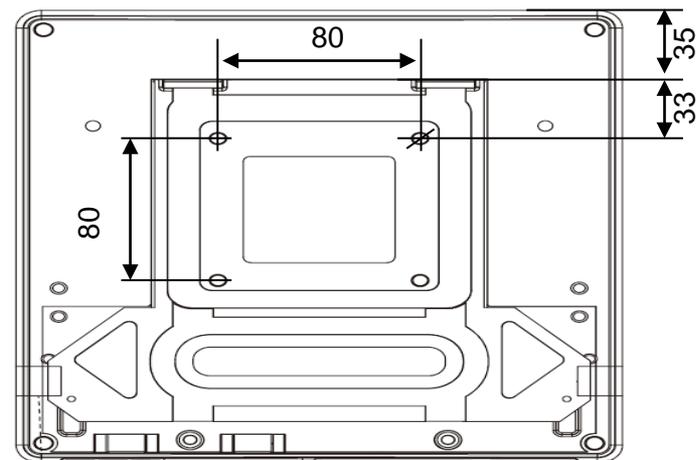

No	Device	Model	Remark
1	Upper-layer device	MST-P3P(S-NET3) MST-S3W(S-NET mini) Web-Client	HUB or network environment is required to support multiple upper-layer devices.
2	Centralized controller	MCM-A202, MCM-A202A MCM-A202B	
3	Interface Module	MIM-B04A, MIM-B13A, MIM-B13B	
4	WHM interface module (Serial Type)	MIM-B12	Up to 8 watt-hour meters are supported for 1 MIM-B12. Specified Korean watt-hour meter
5	WHM interface module (Pulse Type)	MIM-B16	Up to 8 watt-hour meters are supported for 1 MIM-B16. Support local WHM for power distribution system
6	Power meter	Specified Korean watt-hour meter	Local watt-hour meter can be used after launching MIM-B16
7	DI/DO	No power dry contact	DI: Max.8, DO: Max.6
8	Outdoor unit	Support all Samsung system air-conditioner outdoor unit	

- Dimension

Main Part

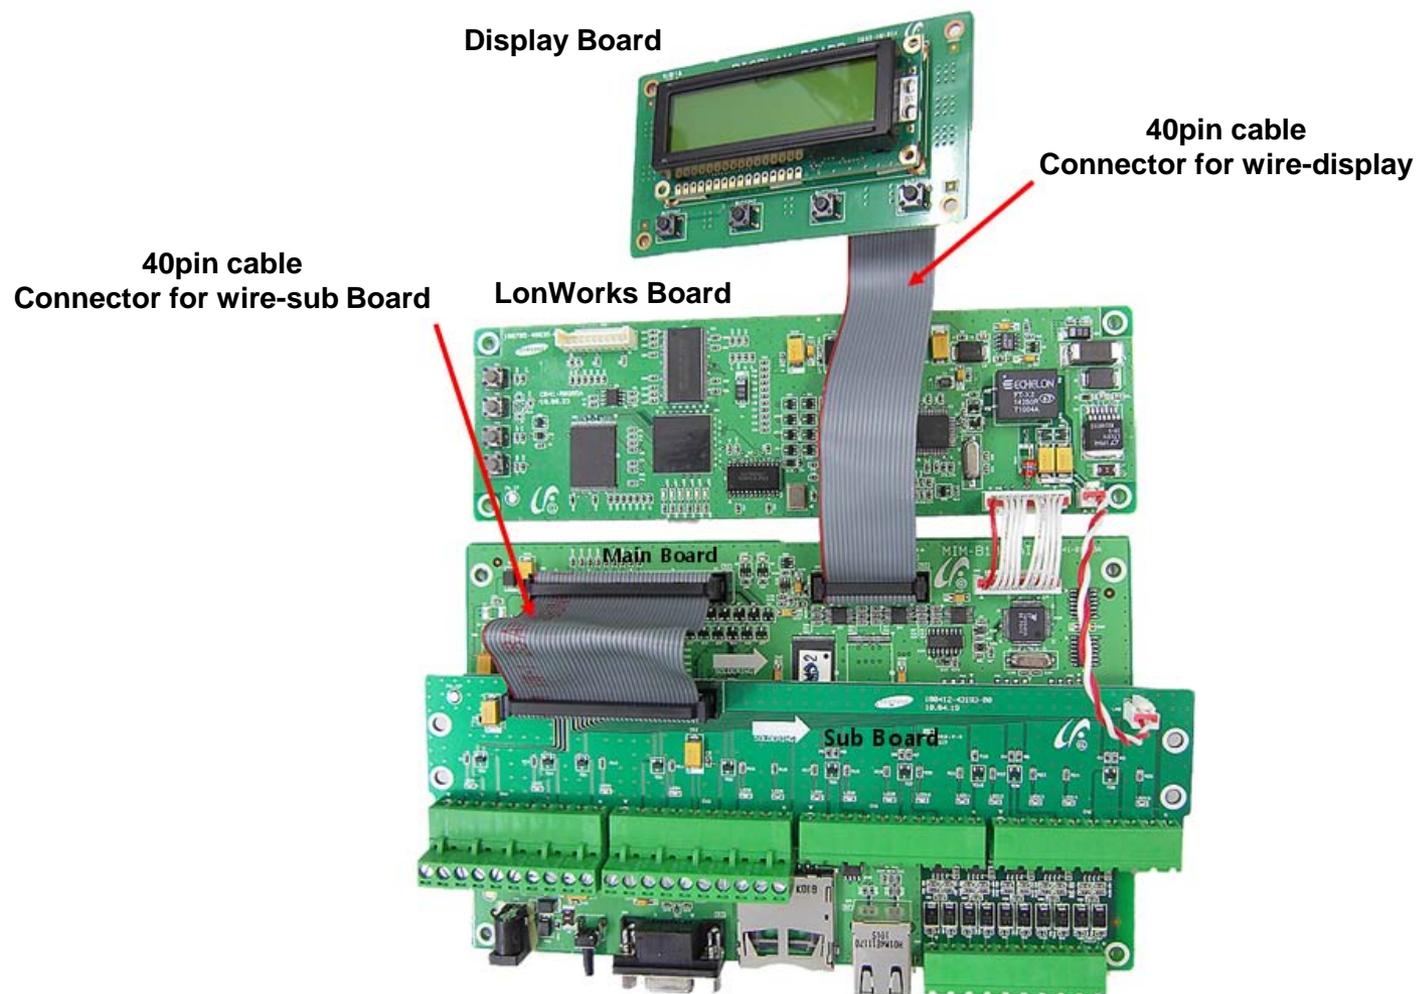

Holder

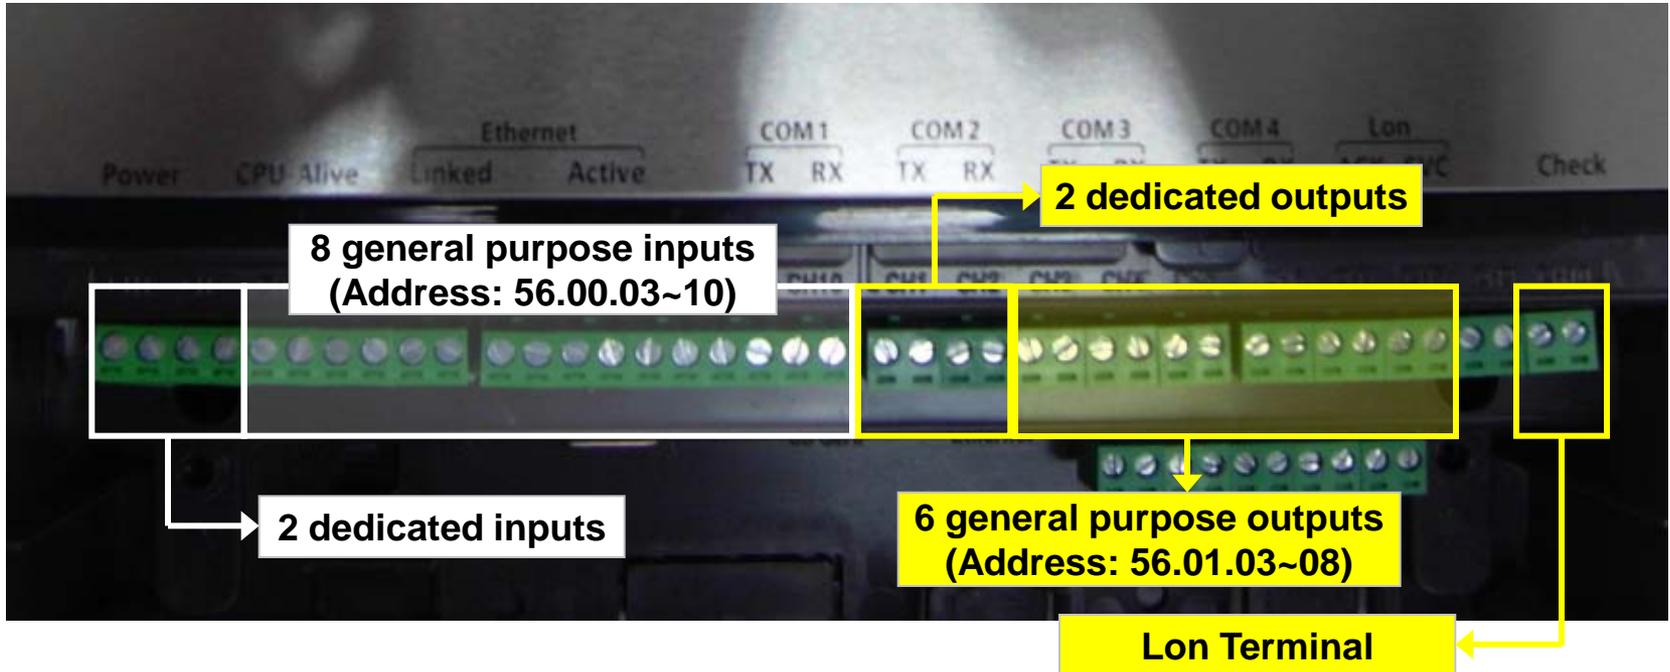

Unit : mm

- Boards & Connectors

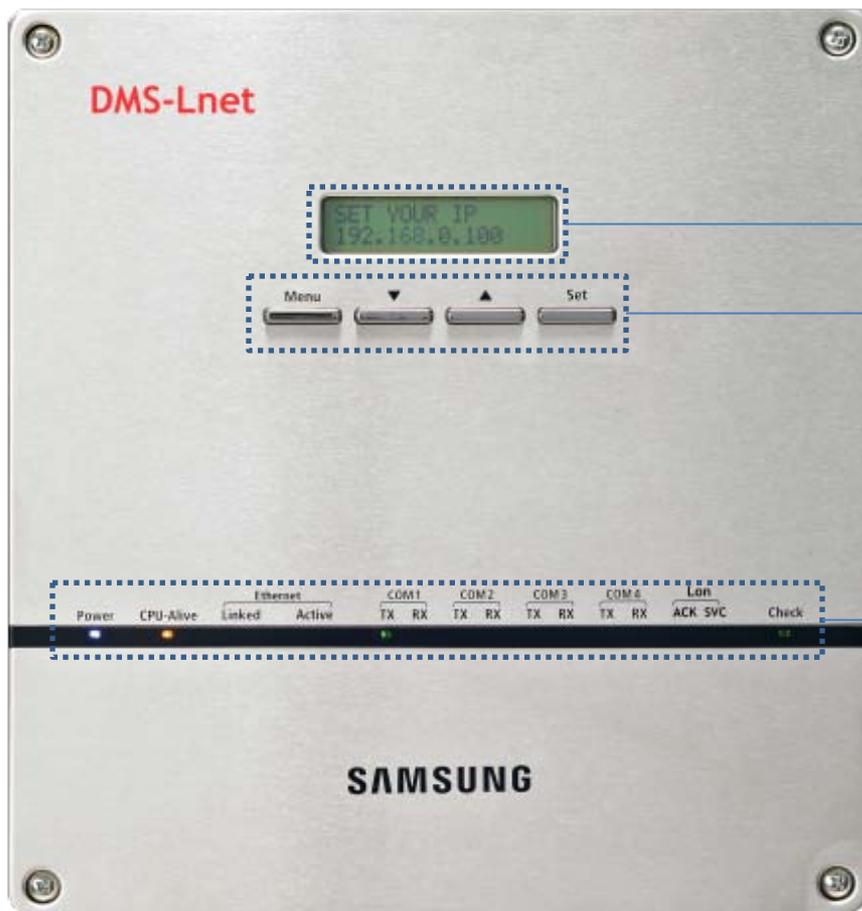

- Connectors

- Interface with external control system
- 2 dedicated voltage-free inputs (Emergency control and others)
- 8 voltage-free contact inputs for general purposes (Open/short contact input)
- 2 dedicated voltage-free outputs (Operation/Error)
- 6 12-voltage outputs for external interlocking systems
- Terminal Block for LonWorks communication (TP/FT-10)
- Inputs and outputs have each fixed address
 - Digital input address: 56.00.03~56.00.10
 - Digital output address: 56.01.03~56.01.08

- Exterior

LCD Display

Shows current time and IP address. Various messages will be displayed depending on button input.

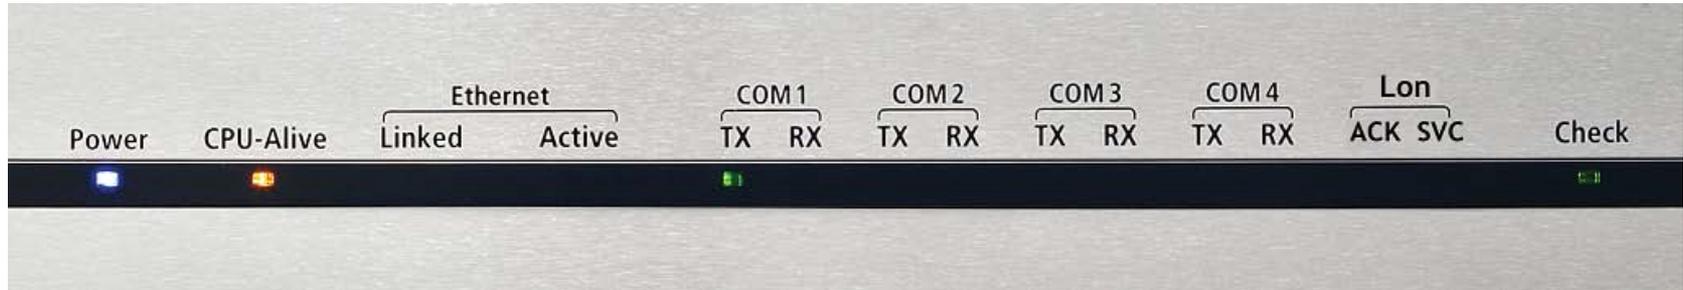

LCD operation button

There are 4 buttons(Menu, ▼(Down), ▲(Up),Set) and you can access to menu and move, check the menu.

LED Indicator

Check 15 LED status such as Power, CPU-Alive, Ethernet-Linked/Active, COM1~4-TX/RX, Lon ACK, Lon SVC and Check.

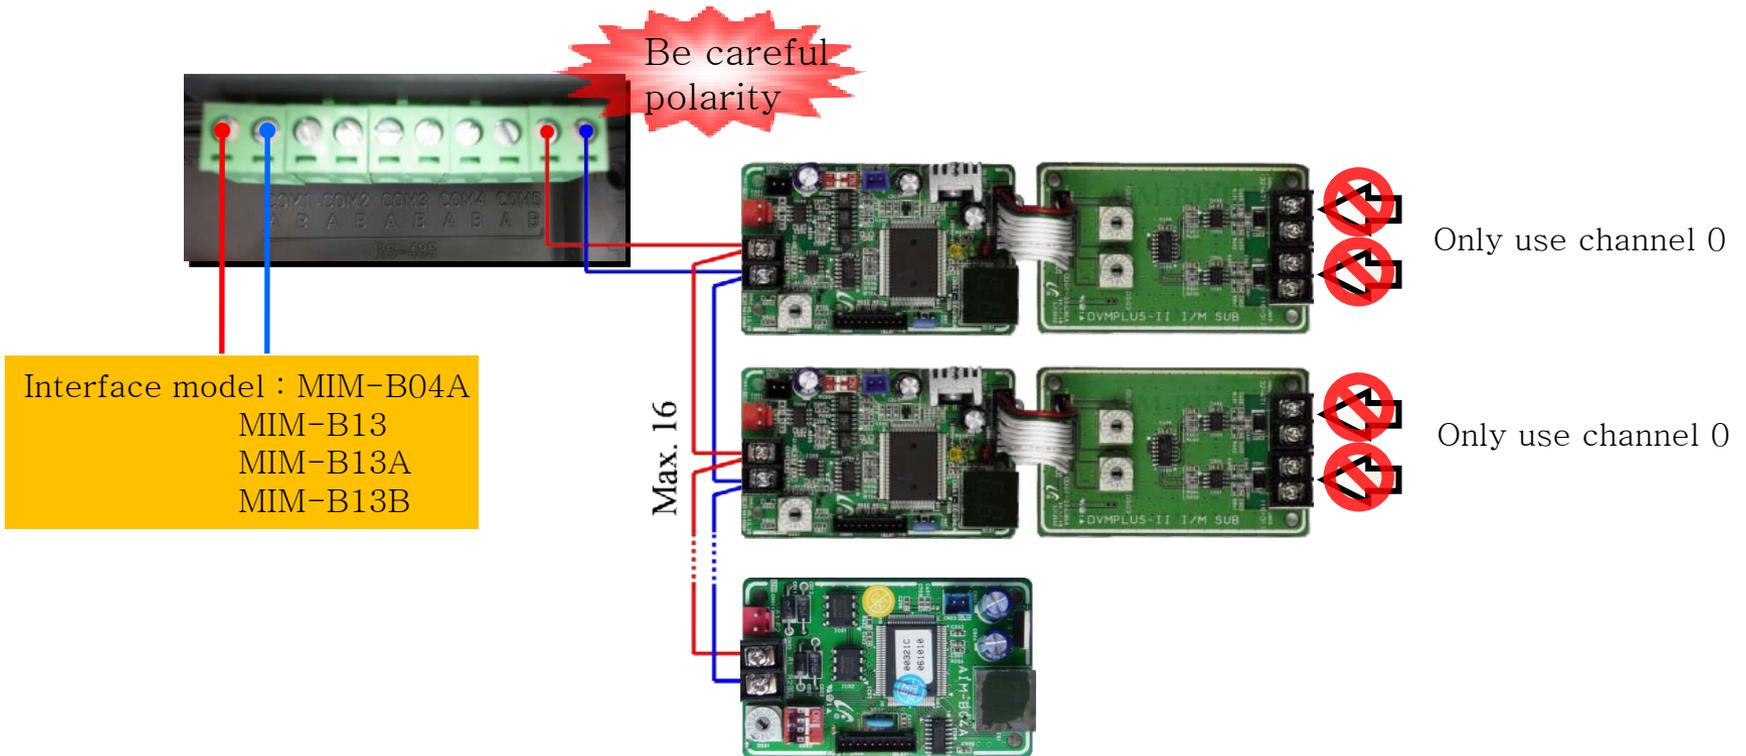

- LED Indicator

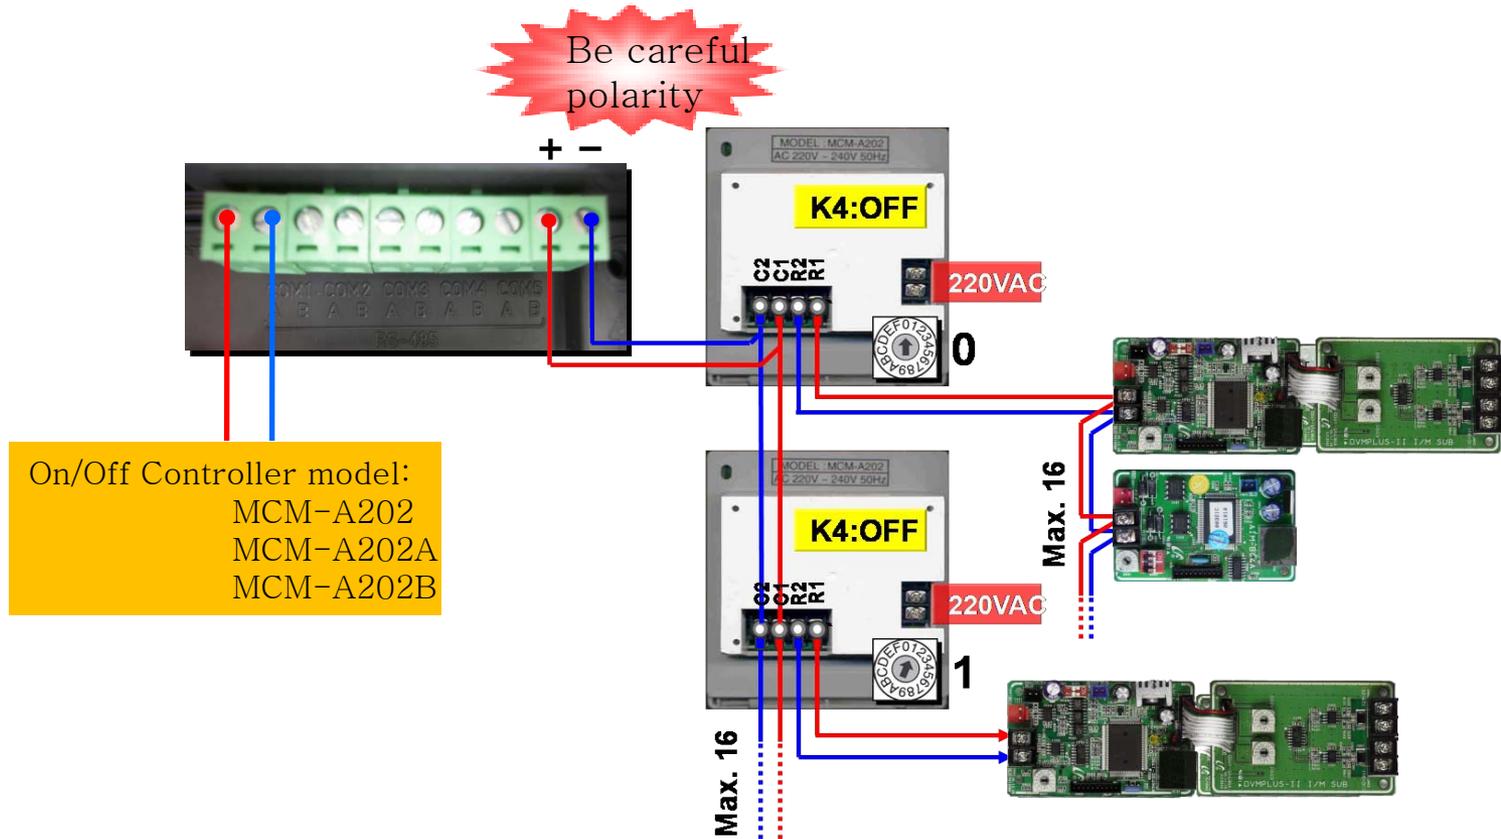

Item	Name	Status
Power	Power indicator	Turns blue when the power is supplied.
CPU Alive	CPU operation indicator	Blinks in orange with 1 second intervals during normal operation.
Ethernet-Linked	Internet connection indicator	Turns green during normal connection.
Ethernet-Active	Internet data transmission/reception indicator	Blinks in orange during normal transmission/reception.
COM1~4 – TX	Channel 1~4 Centralized controller/Interface module Data transmission Indicator	Blinks in green during normal reception.
COM1~4 – RX	Channel 1~4 Centralized controller/Interface module Data reception Indicator	Blinks in green during normal reception.
Lon ACK	LonWorks data reception indicator	Blinks in green during normal reception.
Lon SVC	LonWorks device status indicator	Blinks in green during un-configured. - Needs commission by integration tool (Ex. LonMaker)
Check	Indoor/Outdoor unit/Communication check Indicator	Turns green when notice occurs.

- Wiring to interface module

LonWorks gateway can be directly connect to interface module without On/Off Controller.
Up to 16 interface module connecting per one communication port.

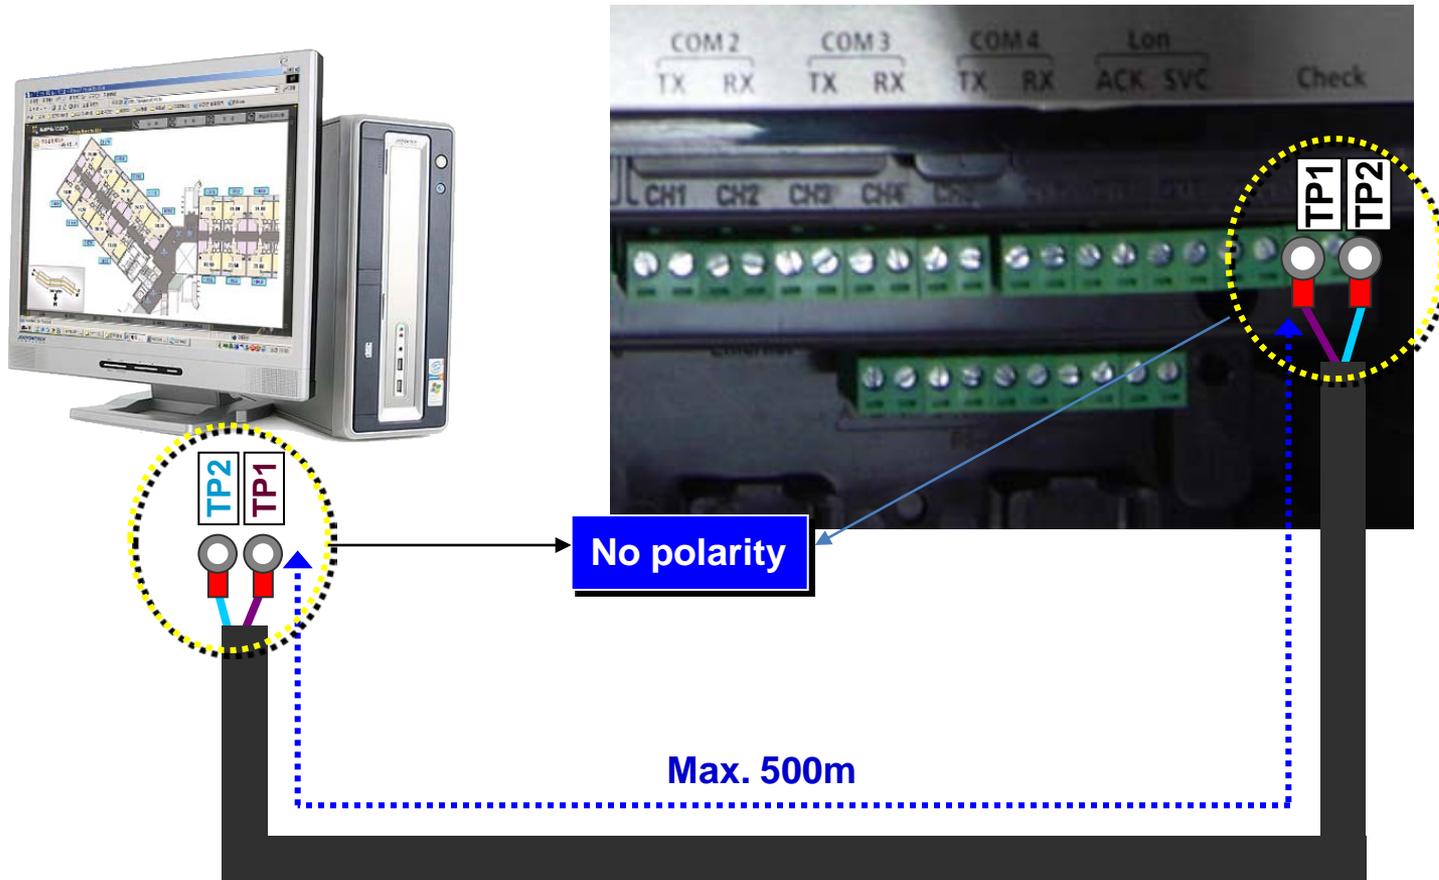

- Wiring to On/Off Controller

※ CAUTION

- 16 On/Off Controllers can be connected to each 485 communication port.
- Total number of On/Off Controllers connected to LonWorks gateway are limited below 16EA.

- Wiring to LonWorks System

Wire : Twisted pair (TP/FT-10, TP/XF-1250 and TP/XF-78)

NOTE : The maximum distance for free topology connection → 500m between nodes

- Commission to LonWorks System

To activate the Service Pin, Press and hold [SET] button for more than 3 seconds

During commission, Neuron ID will be sent and [SVC] LED of the front panel will be lit up for a second.

- Check and change Object ID in LonWorks Function Setting

.Check the Object ID

- Object IDs are assigned in order from 1 to 128 when initial tracking is executed.

.Change the Object ID

- Click [Edit] Box and change the Object ID
- Object ID ranging from 1 to 128
- Object ID shouldn't be duplicated in each devices
- Device without object ID can't transmit data to LonWorks system.

18	nvoDeviceAlarm	Remote control Lock, Filter Sign, Thermo ON/OFF, Error occurrence status display	O	O	O
19	nvoOccOpMode	Cooling only/Heating only setup status display	O	X	O
20	nvoCoolTempLock	Low temperature limit setting status display	O	X	O
21	nvoHeatTempLock	High temperature limit setting status display	O	X	O
22	nvoUserLockout	Display the restriction of remote control use	O	O	O
23	nvoEnergyComp	Display electricity usage (Time Period)	O	X	X
24	nvoEnergyCon	Display electricity usage (Basic date)	O	X	X
25	nvoRuntimep	Display used hours (Period)	O	X	O
26	nvoRuntime	Display used hours (Basic date)	O	X	O
27	nvoDevListDesc	The summary of device information (Model, Address, Operation Status)	O	O	O

- Configuration Property

● Send Heartbeat

Menu	Remarks
Definition	This configuration property defines the maximum period of time that expires before the specified network variable outputs will automatically be updated. The associated network variable will also be transmitted as a heartbeat output on a regular basis as dictated by the Maximum Send Time (nciSndHrtBt) configuration value
Valid Range	The valid range is any value between 0.0 sec and 6,553.4 sec. Setting nciSndHrtBt = 0.0 (default value) disables the Send Heartbeat mechanism.
Recommendations	If required, especially in an event-driven update for monitoring, set a value greater than the default update rate (currently, 10s).
Associate Values	nvoDMSAlarm, nvoSystemAlarm

● Minimum Send Time

Menu	Remarks
Definition	This configuration property defines the minimum period of time between automatic network variable output transmissions. The associated network variable will be updated no faster than the Minimum Send Time (nciMinOutTm) configuration value.
Valid Range	The valid range is any value between 0.0 sec and 6,553.4 sec. Setting nciMinOutTm = 0.0 (default value) disables the Minimum Send Time mechanism.
Recommendations	If required, set a value greater than the default update rate (currently, 10s). Any smaller value does not yield a change in the update pattern.
Associate Values	nvoSpaceTemp, nvoSetPoint

- Configuration Property

● Minimum Temperature Change

Menu	Remarks
Definition	This configuration property sets the minimum temperature change required before the associated output network variable is updated. The associate network variable will not be updated unless the change is greater than or equal to the Minimum Temperature Change (nciMinDeltaTemp) configuration value.
Valid Range	The valid range is any value between -273.17°C and 327.66°C. Setting nciMinDeltaTemp = 0.0 (default value) disables the Minimum Temperature Change mechanism.
Recommendations	If required, set a value greater than 0.1 degree in Celsius. Also, consider the maximum of the typical operating range which is 50 degree in Celsius.
Associate Values	nvoSpaceTemp, nvoSetPoint

● Start-Up Delay

Menu	Remarks
Definition	This configuration property controls the minimum period of time that expires before outputs are retransmitted. It also is the minimum amount of elapsed time after a power-up or re-establishment of communications before a control action takes place. This can be used to account for the settle-down time of a network. All of the output network variable will be updated no faster than the Start-Up Delay (nciDelayStartup) configuration value. Also, the heartbeat mechanism will not be enabled unless the elapsed time passes the Start-Up Delay, if used
Valid Range	The valid range is any value between 0.0 sec and 6,553.4 sec. Setting nciDelayStartup = 0.0 disables the Start-Up Delay mechanism.
Recommendations	If required, set a value greater than 1 minute which is a settle-down time of the installed device.
Associate Values	All output network variables
